

# OREGON SEED BLOWER

- ⇒ Calibrated Air Flow
- ⇒ Precise Separations
- ⇒ 1/3 HP Blower/Motor
- ⇒ Easy to Operate
- ⇒ Made in the USA

Economical laboratory blower for cleaning and separation of seed samples. The blower is operated with an automatic timer and a manual setting. Airflow is generated by a 1/3HP blower-motor combination.

Precision built air columns trap the lightweight seed and fractions. The good, pure seed, is collected in the seed cup on the bottom. A calibrated valve on top of the column controls separations.

This model comes in a hardwood plywood cabinet, on casters, with storage compartment. A removable sample cup, with wire mesh bottom, eliminates the need to disassemble entire air column for sample removal. New style tube kit eliminates the need for removing the entire column to obtain separations. Blower and tube are sold separately.

27"x31"x36"H

Shipping Weight 120 lbs

**OSB** 115V/60Hz

**OSB-220** 220V/50Hz

**NST175** 1<sup>3</sup>/<sub>4</sub>" New Style Tube Kit
